Im gonna demonstrate exactly what that is personal lift the presser foot were gonna hold up by the lever here and what you are gonna focus on now is our turn hand wheel is the same dog so the dog comes to the Ford notice it comes up and its gonna carry the material as it drives back and its gonna drop down. So were gonna get a positive feed from the bottom of the fabric is gonna be fed from the bottom. That is drop feed. That were gonna drop the pressure pay down now were gonna focus on the outside foot, so as that as the the dog comes up in the front the outside foot marries with defeat. Don't it. This the Center for this is up. Your feed and he have the ultra Press your feet in between to now we have a positive top feed and bottom for all trading pressure. Page as well. This machine is a federal States three O one lock stitch. It has an oscillating shuttle is designed for extremely heavy heavy duty sewing wedding. I can handle up to an inch and a quarter of sewing and up to six cord, so the seven 33 oh Dish five has an awesome lighting show this allows it to go its extremely heavy duty thread so it has a range really from say it takes 46 up to a text. 600 or six corn put that in perspective, a standard sewing thread thread for upholstery is tex 70. This can handle nine times that size in diameter this is a text one 38 which is kind of a small thread for this machine the needles on The machine is a system one thousand or one thousand H and the neils range from size. Eighteen to 29. <http://adanavidalikompresor.com/userfiles/98-ford-f150-manual-transmission-fluid.xml>

Now were going to show you how to thread the machine to start with the bottom and the bottom,

with the show so were gonna remove this access and we take a screw driver here to be able to get to the latch and theres a latch here that were going to actually spring open and we just pushing spring it open and then the shuttle comes direct We out this is your show and, as you can see, its a pretty large piece and where to put this and No look down here and theres a theres, a little piece of the bottom. Here is a little last piece to that. So were kinda coming to that backwards, but put her shadow and well make sure it goes into that piece. There were cool. It straight up into it gets too right. There at that point, you can push it in the clicks and you release and thats all you have to do now for the top thread best thing for me show you from the beginning to whats, to that just like her top friend here Were just going to cut it off and just pull the top for it completely out and were starting now for the top threat. Were gonna open this reservoir here this is, if you wanna put some mover campaign thread, if you not sometimes a good keeps the thread for the good the needle and also helps with the bond doesnt come on thru started sharp edge have a little pig Tell here that were slick through and uh, we get through the pigtail. Sometimes its easier, if you have a pair of tweezers uh didnt have any. So were doing the hard way through this tension. This is remain top tension and we have attention release long here to show you that when you let your pressure foot and I actually purchase this piece up into the attention They were gonna drop this straight down through this cavity here and youll see it come out towards the bottom Typically, the top part of this thrilling doesnt come out once you get a threaded. This is a trick to make sure we stay in into this is the roar pensioner and the Grand twice so we all way there so were gonna come back for the under this piece here.

What really getting, then check spring is looking here, look into the cheques spring this check Brain works. This direction Another support thread work through this top one straight through And weve been through this little slot, you dont have to decide The caesar just avoid boring needle so you can get to this old hold a little more thread guide. The straight through their and uh bring the needle up from left to right were gonna go on the needle make sure the score from illegals and theres distraction and takes care of your top trip were gonna discuss the features of the seven 33. Our dash, five so very robust machines very heavy has 16 Ford edge work space as extra large hand You know, whats about a 14 inch diameter that is gorgeous for sure share with your car underneath here we have a show and were gonna have to open this up so spring in the short get to it and open this up so we can shit here. We have a extra lord shuttle well, this big piece. This family, this is your shuttle race. This is all steel And its an awesome lighting show and so people dont know what it also does. It was just gonna show you what that does. We have the sofa is put the ball in correctly Shes the shuttle okay so is what happens is if you watch the the show will come back in one direction and go it will not go all way round. Just goes about three quarters away and also its back and forth thats an oscillating shuttle has extra high presser foot lift that gives you a clearance of into the four so if you can see now Im gonna bring a little to the high point in the Christian click. The pressure for that you see. I have my whole hand of me this is the sewing capacity of machine and were gonna so give a demonstration of healthy concert We have a double row, theater underneath here you can see a heroes set of the single road feed mechanism. We have a reverse state. Its located here this is your reverse.

You can do by manually hand or we have this set to it to a pedal and we can be reversed pedal surrounded by hand or metal and all the same off. You can change your specially for the Wall where it comes down along with new stitches the more you come up the shores system so thats how you adjust your stitch way uh at maximum Additionally, we can accomplish around two and a half stitches for edge. We cover the machine at about 550 stitches. That very something people can run little faster. Uh. It all depends on the type of thread the material and it certainly the thickness of the material and the density of the material in government. We have a President labor top. They can hold hold everything up and we have a pressure foot head on the bottom that we can do the same

thing So do the pressure points. The two areas to do that. Oh tough. We have some pulling reservoir cash underneath theres, some nice big. Cushions that big storm the oil and threw a week system. We all the machine underneath here we have a summer type things so all the little dogs were gonna oil, no little cats here pill up and the shame is nice lubricated About covers it alright so were gonna dish, sewing testing now reduce some pretty thin mature were. Gonna get a discreet thick material. So make sure that, but I had my friend third of the way here to get started and uh one way that you can get started here is gonna put one layer here. So you can see is a three is one hold your top rate in the store now typically, you can hold it in underneath. Is or the male position, like this the only talked also event to if you want to be called a minute or you can bring it back behind the Put well put a hold of this pressure comes down. I usually like to take a couple postage is here get started and then, once I get that Ill come back, but all that tops revenue difference to third on the way Thats because you see, we got up three more system. Upholstery piece of leather. If you wanna do it touch top stitch um.

<http://www.erejuvenation.co.uk/images/canon-eos-300-rebel-2000-manual-pdf.pdf>

This is about a stand is then, as you can go. We probably wanna just attentions a little differently. Uh this material as you can see, it says the knots on the bottom here so we wanna just attentions but were gonna go further than that. Something like this so now were gonna go to to a nicer thicker piece of material We, kinda knew I was a reverse Were doing a double patter were able to accomplish it with versus that simple Were gonna sew onto another piece here And the Were gonna change it up a little bit Start with this small place Will they take this pace with go ahead and doubled over Real later peace of fabric every single piece of leather here lets go hit the spot with over 23 times and just making like a big same Where are we gonna be good power weather right. So were gonna were. Gonna start challenge that machine now its a little more density. This year Rethink this is Love beer, different take a look at what weve got so far This gives you a good example of somebody something doesnt. Have a whole lot of density, but it certainly has a lot of fluff and so if your doing something like this is good here. Were talking about something that we cant even band. So that were gonna go to four layers 56 layers secure He says a quite easily got a whole lot of different Were gonna really challenge it this is a winning this is probably one of the dances weddings. Ive ever saying because shes saving hard to hold it can even get into full without some pressure. So was just go ahead and get a little challenge on this This material is not all that thick, but its really getting dance getting hard to turn move No challenge As you can see, we start off with just a thin layer of material when it to a number of layers and batting and we ended up with something that really has a lot of density but not a not a whole lot of fitness to it. Whenever to some, some uh saddle, whether uh certainly go a few more layers and this and we really challenge gonna shape it up with this out.

We have 100% satisfaction rate with our customers. It also can do any job a regular flat bed sewing machine would do. Big and heavy the most heavy duty sewing machine available from Consew. Everything in this machine built with heavy duty sewing in mind from advanced feeding mechanism to extra long maximum stitch. Its many uses include book binding, building construction barriers and making cargo slings. One of the most advanced machines. Has several upgraded features that make it stand above other machines.

Advanced walking foot motion to avoid gathering, BuiltIn Synchronizer Hub, large hand wheel and more features that make this machine work like a dream. Heavy duty walking foot ZigZag sewing machine. High speed, easy in handling magical performance. It is a serious upgrade from 3 thread serger. Some customer assembly required. For example, if you find a For this, a lightweight single Always remember, Buy self lubricating machines as Get an adjustable This allows you to set the height Large people If the rigger is buying This allows The operator's manual tells you The parts manual Replace the needle and bobbin, and the machine again is A good zigzag machine will Its primary purpose is for zigzag By changing The next machine should be. This machine is a tailor's dream. It is large and fast enough to be efficient, yet easy for the advanced sewer to operate and sturdy enough to stand up to a lot of intense work over extended hours for a long, long time. Consew CN 2053 R1, a heavy duty industrial sewing machine At 30 pounds, the 3450 RPM Electronic Servo motor weighs 30 pounds, meaning it is about 15 pounds lighter than a standard clutch industrial sewing machine motor. The electronic motor is idle when the machine is not actually running and runs only when presser foot engaged. It features a six volt plug which can be used to connect ancillary units if necessary. Not only is the sewing room more quiet, with the Electronic Servo motor, it is also cooler. Clutch motors, on the other hand, run constantly from the time the power switch is turned on until it is shut off. A 220 volt, 550 watt. A belt guard is included and rubber motor mounts reduce annoying vibration when the machine is in use. The top of the adjustable height worktable measures 47 x 21 inches, and features an onboard gooseneck lamp, which can be easily adjusted to shed plenty of light on sewing projects.

A 47 x 21 inches, adjustable height worktable The table height can be set to stand at as low as 24 inches up to 36 inches on durable galvanized steel legs, allowing for optimum work height for sewers of any size. The all metal construction of this utilitarian machine head is uncomplicated and easy for the advanced sewer to sit down and go to work. The Consew 2053 R1 requires a very small learning curve for anyone who is well versed in the basic operation of a sewing machine. Features The highly functional and easy to use built in bobbin winder, horizontal axis transverse rotary hook and drop feed single needle features enable the user to get up and running on any project quickly, no matter if it is an alternation, a mending task or constructing a new garment. The combination zigzag and straight stitching capacity makes it easy to attach lace or elastic as well as to finish a seam, or embroider. The Consew CN 2053 R1 can deliver up to 2,500 stitches in a minute. Straight length varies from 05mm for straight stitches and 09 millimeters for zigzag stitches. Reverse stitching and seam or stitch locking is made easy with the handy reverse stitch lever, conveniently located on the right hand side of the machine head. While the Consew CN 2053 R1 is a single needle machine, the needle position can be adjusted to accommodate custom jobs with just one step. The built in bobbin winder is convenient and uncomplicated. The work table features a drawer on the left hand side to accommodate accessories like scissors, tape measures, oil and other essentials, but it isn't large enough to hold the owner's manual. On the right side of the table, a customized tray is inserted to hold an assortment of small accessories like bobbins, pins, needles, thimbles and needle threaders. Customized tray on right to hold an assortment of small accessories The power switch is easy to find at our fingertips on the right corner of the worktable.

Working on the Consew CN 2053R1 With its ability to produce up to 2,500 stitches per minute, this is one of the fastest sewing machines around. The foot pedal does require a little bit more than a light touch to get going, but when it gets engaged, the Consew CN 2053 R1 really takes off. Adjusting the stitch length or zigzag width is not complicated, but it isn't all that easy to figure out how to master the feature. However, once you perfect that skill, you will find that adjusting the stitch width length and width is not at all difficult. Locking the zigzag stitch length is easily accomplished by simply turning a small knob just above the stitch length regulator. Threading the needle and winding the bobbin are uncomplicated tasks, if you already know how to get the jobs done, but don't rely on the owner's manual. That's because the machine was manufactured in China and the manual was clearly written by people for whom English is not the first language. Adjusting the tension is not difficult for an advanced sewer Adjusting the tension is not difficult for the advanced sewer who is accustomed to the fine art of finding the just right tension adjustment for the thread and fabric they are working with, but the process could prove to be quite the challenge for the novice sewer or even the advanced sewer who has become accustomed to sewing machines equipped with an automatic tension adjustment feature. The one quarter inch clearance under the presser foot paired with adjustable presser foot pressure makes this machine a good choice for alterations, mending, garment construction, and lightweight upholstery projects. It is also great for working with elastic or lace. You could even use the Consew CN 2053 R1 to work with thin to medium thickness leather and suede. There is a button that releases the pressure on the presser foot, allowing for slightly thicker fabrics, but this machine is ideally suited for thin, lighter weight fabrics.

Assembling the Consew CN 2053 R1 is not any more complicated than putting any other industrial sewing machine up. In the case of this one, the installation process for the Electronic Servo motor is no more tedious than installing a clutch motor because the motor mounts are in the exact same locations as those found on clutch motors. While the Consew CN 2053 R1 is easy for advanced sewers to operate, this fast high efficiency sewing machine could potentially turn the new sewer against ever touching a sewing machine again. It is not by any stretch of the imagination user friendly for someone who hasn't been sewing long. Like other industrial sewing machines, the Consew 2053 R1 does not come equipped with any of the familiar userfriendly perks like guides for threading, bobbin winding and applying oil that have become standard on home sewing machines. Nor does it make it easy for the novice sewer to figure out how to adjust stitch length or width. This, coupled with the speed and the mere thought of working on this sturdy, heavy duty machine with its motor housed underneath the worktable, is enough to strike fear in the heart of anyone who might be new to sewing or intimidated by large, high speed machinery. Creating zigzag designs Once you get the hang of it, however, creating zigzag designs, monograms and freehand machine embroidery is not much of a challenge for the advanced sewer. The Consew CN 2053 R1 is great for lightweight sewing jobs. If you already have the right sewing skills, it can monogram and give you some really good freehand zigzag results including monograms and embroidery tasks. But it takes practice. If you have the time to do that, the Consew CN 2053 R1 could become your best friend. It is perfect for a tailor or dressmaker who specializes in alterations or custom made suits, dresses, evening gowns and shirts. Working with lace and elastic is easy with the Consew CN 2053 R1 for the advanced tailor or seamstress.

On the other hand, however, if making heavy upholstery, thick winter coats or working with a lot of thick heavy fabrics like denim or heavy canvas is your thing, then this is not the machine for you. A drawer to accommodate accessories The owner's manual that comes with the Consew CN 2053 R1 is extremely challenging to read and even more difficult to understand. The machine is manufactured in China, and that fact could not be more evident than when you try to read the manual. Most of the manual is written in Chinese. The English translation is poor at best. For example, every time the word "tension" appears in this challenging owner's manual it is spelled "tension." This occurs no

less than four times. Other consistent misspellings are found throughout the manual as well. The grammar is so difficult to follow that you could easily get confused. Quite honestly, it is probably better for anyone who buys this machine to toss the owner's manual aside altogether and figure out how to use the Consew CN 2053 R1 on your own. The Consew CN 2053 R1 is definitely not for the timid sewer or for one who does not already know their way around a sewing machine. Anyone who sews professionally would be pleased with this machine. However, do not try to teach your kids or grandkids how to sew on this machine. Between the speed; the nearly impossible to understand user manual and instructions; and the nonuser friendly machine itself, the Consew CN 2053 R1 is only for the well heeled sewer who is not at all intimidated by it. The quiet energy efficient motor is eco friendly and fast. Stitch quality Speed Ease of use Maintenance Pros 2,500 stitches per minute Quiet energy efficient motor Cons Not good for sewing thick fabrics, leather or suede Difficult to read and understand the owner's manual Not suitable for beginners 20120730 4.0 Overall Score Reader Rating 9 Votes Others Related Posts 3.5 Elna Grasshopper Review July 30, 2012 25 4.3 Kenmore 177.652 Review November 27, 2013 3.

3 Handi Quilter HQ18 Avante Review July 3, 2013 4.8 Alphasew PW 200 Review February 15, 2015 1 23 Responses You mention how it is confusing to learn how to switch from zigzag to straight stitch, but once the skill is learned, it is a quick switch. Care to give any hints about the process. It takes time, but once you get the hang of it, I think you will be satisfied with the results. I suggest you keep a note pad handy so you can write down the settings for the stitch options you like best. Happy Stitching Can you please tell me which similarly priced Consew or other machine you would recommend for using on mainly thicker fabrics. I have not reviewed either of these machines, but that they both have the capacity to handle very thick multiple layers of fabric and have excellent track records when it comes to reliability, user satisfaction and quality. Happy Stitching. Any suggestions I know, DON'T BUY THIS MACHINE. I will highlight the biggest problems I have had 1 It is SO noisy. 2 it shakes when you are sewing 3 It pulls your fabric. It doesn't matter what kind of fabric you are using, I guarantee you will either have puckers, distorted panels, gathering and knots under the needle, broken needles, or broken thread. 3 It has CHEAP CHEAP CHEAP plastic nobs that are SO hard to read and make no sense when you are trying to position your needle, choose your stitch length and width. In fact, if you don't tighten them COMPLETELY and test them over and over and over again, your needle will not be perfectly centered and will cause teeny tiny little zig zags instead of a clean straight stitch. 4 You can HARDLY do anything about the tension. Again, another SUPER CHEAP plastic nob they put there that serves no purpose at all. My next machine will definitely be a Singer or Brother. Another thing, the fact that NO ONE knows about this brand makes it so hard to buy parts for it.

Every salesman I have spoken with has told me these machines are not the greatest and I have no resort but to purchase everything from the man who sold it to me. Don't buy this brand. It is smooth, quiet and really easy to use once you throw out the manual and figure it out. My guess is that all your problems are operator error. With the proper needle will penetrate the most difficult materials with absolutely no hesitation or slip. I have yet to run ANYTHING through it, I have yet to use it busy with other stuff, that I wish I wasn't busy with. Here's my question How thick or rather, what thickness can the REX 607Z handle. I intend to work with leather soft of a 34oz. Without piping my seam thickness will likely be no more than 4mm thick including a very thin leather lining. In your experience, do you think the REX 607Z can handle all of my requirements with ease. I do not intend to be sewing 8hours a day 7days a week, but I will be making several handbags per week on this machine. Your input would be most appreciated. Thank you, Judy Disculpe si debo molestar con esta pregunta. Necesito saber como enhebrar exactamente la maquina CONSEW 2053R1, es recta y zigzag, el manual esta en ingles y chino y no logro entender nada Por favor necesito de su ayuda. Gracias desde ya Can I only sew simple letters with one color or I can also make a logo or a picture on the fabric I get very different answers whether you actually can or cannot do an embroidery from

various vendors. I do not look to mass produce, but more for the hobby purposes, trying different styles and techniques of embroidery. Her videos are very helpful.
