Book Descriptions:

Buchi r-200 user manual

No part of these This can be done by hand or with the supplied tool. Only authorised repair personnel can remove protective equipment and covers with the help of conventional tools. Glass assemblies with diagonal condensers, for standard distillations with vertical condenser, for standard distillations, 17 cm less place requirement than glass assembly A. The basis of this procedure is the evaporation and condensation of solvents using a rotating evaporating flask. It is important that you detect any transport damages when you unpack. If necessary, you must prepare a status report immediately informing postal company, railway company or transportation company. All materials, which come into contact with chemicals are made of glass, PTFE and ETFE. In this case the tension of the rope has to be adjusted. This can be done by the customer. If you order R205, this display module is already installed. When the Rotavapor is turned on by, the rotation speed starts with the preselected rotation speed. Thus, make sure that there is always heating bath liquid in the bath. Then, continue distillation. Repeat this process until all desired solvent is distilled off. At the end of distillation, start rotation, pull up the flask and vent the system. To guaran tee this, operations should be performed according to this rule of thumb. This includes periodically cleaning and checking for damages. Before carrying out maintenance work on the apparatus, make sure that vapour supply and current supply have been turned off. Press the button on the bottom of the drive to block the screwed connection. Vacuum tightness The apparatus is evacuated while flask is rotating. If there is a pressure measuring device, it is determined whether the vacuum remains constant in the system. As a result, people will not be injured from contact with dangerous substances. Residues of chemicals must be removed completely and glass components must be cleaned. <http://www.bleha.eu/KUBA/bleha/userfiles/dcp-560cn-manual.xml>
